

KEYTRAXS

Access Control System

KEYLESS FACILITY

CalAtlantic Access Control Solutions allow you to control sensitive areas within the facility without having to use traditional keys. Rekeying a facility because of one lost or stolen key is expensive. With KeyTraxs all you have to do is go into the computer and shut off the card. It's that simple!

Standard Features control doors and the time each person can gain access. It also sets up a library of access rights and allows easy selection of these rights. Defined access rights can apply to specified doors, elevator floors, computers, time, days and holidays. Always know who is in your facility and where they are. Badge designs and colors define individual departments, monitor vendors, and easy to spot lanyards allow quick visualization of who is an employee versus a customer.

CalAtlantic's KeyTraxs Solution can also be used for gates. If you have multiple deliveries at odd hours CalAtlantic can set up your gates with long range readers that will allow authorized access to your facility grounds. No longer will someone have to meet them there.

Your solution is customizable to your specific needs. If you have an existing system we can easily integrate your old system into a new KeyTraxs Solution that can be used for any amount of doors at one facility or multiple facilities. One server can be used for multiple facilities therefore saving time, money and space.
